Abstract (en)

[origin: EP2182163A1] The actuator (10) has an electric motor (4) i.e. tubular gear motor, for synchronously driving two coaxial output shafts (2, 3). A lateral shaft (5) is connected to one of the output shafts by a gear mesh unit (7) for rotatably driving the output shaft, where a rotation axis of the lateral shaft is parallel to a main axis. A part (2b) of another output shaft is connected to the lateral shaft by another transmission unit (6), so that the lateral shaft is rotated, when the motor is in operation.
