Abstract (en)
The present invention relates to a screen device (1) comprising a screen (2) with thickenings (4) on its lateral sides and a screen guide (3) with a cavity (5) for holding the corresponding thickening (4), and an access slot (6) to the cavity (5) through which the screen (2) extends. The screen guide (3) of said screen device (1) is less susceptible to wear because it has a lower wear factor in a zone which adjoins the access slot (6) and the cavity (5) than the rest of the screen guide (3).
