Abstract (en)

[origin: EP2733603A1] Some methods, computer program products, and data processing nodes identify a data unit in a data memory that is to be operated upon by a processor circuit, and uses a characteristic of the data unit to identify what instruction(s) within an instruction memory is be executed by the processor circuit to perform an operation upon the data unit. The data memory may be local to the processor circuit, and the instruction memory may be remotely accessible to the processor circuit through a data network.
