Abstract (en)

Provided is a vehicle monitoring system (1000) provided with: a control device (10) for performing a monitoring-image-forming function for forming a single monitoring image in which captured images taken by cameras (1) installed in a clockwise or counterclockwise direction around the circumference of the body of a vehicle V are disposed according to the order in which the cameras (1) are installed, a mapping-information-assigning function for appending, to the monitoring image, mapping information for projecting a monitoring image K onto projection surfaces S established by the side of a columnar-shaped projection model M having the surface upon which the vehicle V rests as a bottom surface, and a transmission function for transmitting information containing the monitoring image K with appended mapping information to an external terminal device (800); a communication device (400); and an external terminal device (800).
