Abstract (en)

[origin: US2013020351A1] A dispenser with an optical keying system includes a housing that is configured to carry a removable refill container that contains an amount of material, such as soap, for example. The removable refill container includes microscopic indicia that is visually-imperceptible to a human, which includes an authorization code, as well as a reference code that identifies various attributes associated with the refill container, such as its size, material type, and date of manufacture. Finally, the dispenser includes an optical sensor that is configured to read the authorization code defined by the microscopic or visually-imperceptible indicia to determine whether the refill container is authorized for use with the dispenser.
