Abstract (en)

[origin: WO2013012971A2] There is provided a container, comprising: (a) a cover comprising at least one elastomeric layer; and (b) a food component contained within the container, wherein the food component is a liquid food component or a solid food component, and further wherein the solid food component is configured for producing a fluid food product upon contact with a liquid; and wherein the cover is configured for puncturing by at least one liquid transfer device for injection or extraction of the liquid food component or the fluid food product, and further wherein, upon withdrawal of the at least one liquid transfer device from the container, the cover is configured for resealing itself against leakage of any of the liquid, liquid food component, fluid food product, or combinations thereof. There is also provided a container comprising a plunger and spring. There are provided methods of using the aforementioned containers.
