Abstract (en)

[origin: WO2013011248A1] The present invention relates to an antitheft device (1) including a ring (2), a means (4) for locking the ring in a closed position, and an antitheft detection means (3), the ring including a body (20) which has a first end (21) near which the locking means is connected, a second opposite free end (22) which is to be inserted into the locking means, and at least one circular portion (23) which extends from the second end (22) and which is to engage with said locking means, characterised in that the body of the ring includes a linear portion (24) arranged as an extension of the circular portion (23) opposite the second end (22). The linear portion imparts additional resilience to the device contributing to the ejection of the second end of the ring from the locking means.
