Abstract (en)
[origin: WO2013010743A1] The invention relates to a glazing panel (100), particularly an insulated glazing panel, comprising at least a first (10) and a second (11) sheet of glass which are joined together by an intercalated surround (12) which holds them a certain distance apart, and between said at least two sheets of glass at least one internal space (15) closed by the intercalated surround positioned around said internal space. According to the invention, the intercalated surround (12) comprises an opening (122) causing the internal space (15) to communicate with the outside of the panel, the panel comprises at least one electrically conducting element (14) inserted into the opening, a first end (141) of the conducting element being situated inside the internal space and a second end (142) of the conducting element being situated outside the internal space, and the panel also comprises a first plug (17) of thermoplastic elastomer material closing the opening (122) around the electric conducting element.
