Abstract (en)

[origin: WO2013014346A1] The invention relates to a method for filling a tank with pressurised gas, the method including: a step of measuring the initial pressure ($P(t_0)$) in the tank; a step of determining the initial amount ($m(t_0)$) of gas in the tank; a step of measuring the current pressure ($P(t_i)$) in the tank; a step of determining the current amount ($Q(t_i)$) of gas transferred to the tank; a step of calculating the current amount ($m(t_i)$) of gas in the tank; a step of determining the current temperature ($T(t_i)$) of the gas in the tank, the method being characterised in that, for the step of determining the current temperature ($T(t_i)$) of the gas in the tank, said temperature ($T(t_i)$) is expressed and calculated only in accordance with variables which are the current pressure ($P(t_i)$) in the tank and the current amount ($m(t_i)$) of gas in the tank; the expression of the current temperature ($T(t_i)$) according to the current pressure ($P(t_i)$) and the current amount ($m(t_i)$) of gas in the tank being obtained from the equation of state of the actual gases in the tank $P(t_i) \cdot V_{10} = Z \cdot n \cdot R \cdot T(t_i)$, the compressibility factor Z being expressed as a function of the temperature $T(t_i)$ and the pressure $P(t_i)$ of the gas in the tank according to a first degree formula: $Z(t_i) = (e \cdot T(t_i) + f) \cdot P(t_i) + g$.
