Abstract (en)

[origin: WO2013014054A1] The invention includes a portable device and a method for the geolocation and continuous location of an object moving in a constrained environment. Said device includes: a means (10) for determining the travelling speed vector of said object by means of an anemometric measurement, which is capable of performing measurements of the relative wind generated by the movement of the object, and of outputting a corresponding signal (11); and a means (12) for processing said signal, which is capable of calculating the speed vector of said object, as well as the position of the latter.
