Abstract (en)
[origin: WO2013016143A1] A computing device comprises a data storage system that stores instructions; and a processing system coupled to the data storage system. The processing system reads the instructions from the data storage system and executes the instructions. Execution of the instructions by the processing system causes the computing device to generate patient-centric records. Each of the patient-centric records comprises patient data regarding a different patient in a population. The patient data of the patient-centric records is based on data received from multiple data sources. The data from the data sources provides information about the patients in the population, and each of the patients in the population have received one or more therapies.
