Abstract (en)  
[origin: EP2735520A1] The container (10) has ring enclosing walls (16) arranged on a container inner space (14) and formed with a handle hole (18). A first edge portion of the handle hole is provided with multiple elastic flexible parts. Fibers (42) are arranged at a second edge part opposite to the grip hole. A piece extends along the fibers and the second edge portion. The fibers are secured at a carrier part (24), which is connected with the enclosing walls through the handle hole. The carrier part comprises two plant plates (28, 30) that rest against the container inner space and a wall outer side.
