Abstract (en)

[origin: EP2735662A1] A supporting structure for supporting equipment (30) in a suspended ceiling with ceiling tiles (27) supported by profiles (21) having an upstanding web and a horizontal flange, said supporting structure comprising, an elongated member having a support flange extending between a first end and a second end, at least one of said first and second end being provided with a connecting member having a first engagement portion and a second engagement portion, wherein said first engagement portion is arranged at a first distance from said support flange on a first side thereof and the second engagement portion is arranged at a second distance from said support flange on a second side thereof, and wherein said first and second engagement portions are arranged for engagement with said profiles (21) such that vertical displacement of said supporting structure is restricted. The invention also relates to a suspending ceiling system comprising such a supporting structure.
