Abstract (en)

[origin: EP2735669A1] The method involves providing a cladding (1) in form of a roller (8) extending according to a longitudinal direction. Adhesive strips (4) are fixed on a surface (2) of the cladding according to the direction. Cut-outs (D1-D3) are formed in the strips according to the direction for obtaining the claddings covered with adhesive. The roller is provided with a layer made of a material selected from a group of PVC, natural rubber or synthetic linoleum. A surface (6) of the strip is covered with a protective film (7), which is made of a silicone-coated plastic, silicone-coated paper or cellophane. An independent claim is also included for a cladding.
