Abstract (en)

[origin: EP2735675A2] The closure device has a door plate (14) with two door plate areas (16,18), where the integrally formed door plate has an upright edge (15) that is engaged with a door leaf (10) and a recess (17) for forming the former door plate area. The recess is adapted to a cavity (19) that incorporates the handle in a retractable assembly. The height of the wall of the door plate enclosing the recess in the former door plate area is measured greater than the height of an edge projection (30) of the cavity engaging in the recess.
