Abstract (en)
The present invention relates to a gas tap comprising a tap body with an inner housing suitable for receiving a rotary regulating plug for regulating gas, a rotary shaft (4) coupled to the rotary plug, and provided with a transverse means (6), a return spring, and a cover (7) covering the housing of the tap body and guiding the rotation of the shaft (4) at an angle (A) in the two directions from an initial position (8) corresponding to the OFF position for cutting off the gas flow, and a final position (9) corresponding to a specific gas flow, the cover (7) comprising a sliding surface (10) for the transverse means (6), comprising a plurality of housings (11) for the transverse means (6) in the movement thereof over said surface (10), these housings (11) defining different positions for regulating the gas flow.
