Abstract (en)
[origin: CA2842490A1] The invention relates to a manually operated press, comprising a cam disc (202) that is pivotably mounted about an axis, an actuation member (203, 220) that acts upon the cam disc (202) for producing a pivoting movement, a press slide (105) and a press stand (101) that accommodates the press slide (101) allowing it to perform a stroke movement. The pivoting movement triggered by the actuation member (203, 220) is converted by the cam disc (202) into a stroke movement of the primary piston (205) and is transferred to the press slide via the hydraulic line (107) and the secondary piston (104).
