Abstract (en)
[origin: WO2013013751A1] A door handle arrangement (1) for a vehicle, having a bearing bow (3) which is fastened to a door outside panel (2) in a vehicle door and is intended for the pivotable mounting of a door handle (4), and a locking cylinder (5) which is insertable from the outside along an insertion direction A into the bearing bow (3) through an opening (2a) in the door outer panel (2), wherein the locking cylinder (5) can be held by a clamp (6) which is guided in the bearing bow (3) and is displaceable transversely with respect to the insertion direction A, wherein the clamp (6) is displaceable via three consecutive sections, and wherein, in a first section, the locking cylinder (5) is freely movable along the insertion direction A, and is held by the clamp (6) in a form-fitting manner in a second section and frictionally in a third section, and a method for installing the door handle arrangement (1) according to the invention in a vehicle.
