Abstract (en)  
[origin: WO2013014357A1] This system of detecting and locating a disturbance (P) in a medium comprises a medium (10) for propagating bulk acoustic waves (30, 32), means (12) of emitting bulk acoustic waves in the medium, means (14) of receiving bulk acoustic waves after their propagation in the medium, intended to supply a reception signal (R) from the received acoustic waves, and means (50, 60) of detecting and locating the disturbance (P) in the medium from the reception signal (R). The medium (10) comprises a layer (16), referred to as the dermis, made of elastic material whose thickness can be deformed locally by the disturbance (P).
