Abstract (en)

The present invention refers to a modular system for making furniture objects and the like, such system comprising a rather limited number of types of pieces, whose shape is such as to be able to make a wide variety of shapes. This modular system is of the type providing for the use of a limited number of modules having different shapes, means being provided which are adapted to mutually connect these modules; the modules (A, B, C, D, E) have their plan shaped as a right parallelogram and have, on the four sides of their perimeter, a groove whose sides are parallel to the bases of the modules (A, B, C, D, E). In particular: module (A) has its four sides perpendicular to its bases; module (B) has three perpendicular sides and a side slanted by 45° with respect to the bases; module (C) has two contiguous perpendicular sides and other two contiguous sides slanted by 45° with respect to the bases; module (D) has three sides slanted by 45° with respect to the bases; module (E) has all its sides slanted by 45° with respect to the bases.
