Abstract (en)
[origin: EP2392388A1] The touring binding has two bearing portions located on different sides of a longitudinal axis. The bearing portions are adapted to lateral abutment sections of a shoe. Longitudinally positionable sections are separated by one of the bearing portions, where the shoe is supportable in an initial position. The abutment sections are positioned in an intervened ready position to the bearing portions with respect to a position along the longitudinal axis.
