Abstract (en)

[origin: EP2738114A1] The stopper (1) has an inviolability band, and a strip (11), where a lower peripheral side of the band presents a positive cusp (12) at a level of the strip. A flange (4) is provided in a container (6). A thrust force is provided on the strip so as to provide a displacement for the strip, where the displacement is proportional to the height (h) of the cusp so as to shift an upper side (11a) of the strip above a plane (7a) of a lid (7) to form the inviolability band that is attached to the strip.
