Abstract (en)
A device (10) for packing objects comprising at least two tubular elements (13) obtained by folding a substantially sheet-formed body (11), each tubular element (13) being provided with at least a main wall (12), in which at least a flap (120) is punched in the main wall (12) which flap (120) projects from the respective main wall (120) and is configured such as to be able to flex at least partially elastically internally of the respective tubular element (13), defining a concave impression (17) in the main wall (12) for housing at least an object (B) resting on the flap (120).
