Abstract (en)

[origin: EP2738135A2] The device has a fill product outlet (200), and an operating element (7) in contact with the fill product outlet for influencing discharge of a fill product from the fill product outlet. An ejection device (5) is provided at an end of the fill product outlet, and ejects a fill product residue along discharge direction (A) of the fill product. The operating element comprises a valve cone (72) of a filling valve and a plunger shaft of a dosing unit or a piston filler. The ejection device comprises a gas-permeable membrane for applying gas stream in the discharge direction. An independent claim is also included for a method for filling a container.
