Abstract (en)
[origin: EP2738330A2] The structure has a tape lobe (1) that is provided with a projecting pin (4) which is engaged in recess (5) of receiving portion (2). The tape lobes are slid into receiving portion by lowering a door casement-side tape half portion against a withdrawal. The tape lobe is provided with a threaded bore in which a set-screw (9) is arranged. The set screw is pivoted according to lowering of door casement-side tape half portion into hole (11) which is formed adjacent to threaded bore in receiving portion, so that door casement-side tape half portion is locked.
