Abstract (en)  
[origin: EP2738343A1] A screening arrangement (1) for a roof window comprising a frame (2) with an electrical outlet (25, 26), the screening arrangement (1) comprising a top element (4), two side rails (8, 9) and a bottom element (7) being movable between a non-screening position and a screening position by means of an electrical motor (710) and at least one electrical connection device (714, 715) for providing electrical power to the motor (710) arranged in said bottom element (7), and at least one electrical guide (811, 812; 911, 912) extending substantially in a longitudinal direction (L) of at least one of the side rails (8, 9), wherein the top element (4) comprises an electrical connection element (410, 411) for establishing an electrical connection between the electrical outlet (25, 26) and the at least one electrical guide (811, 812; 911, 912) such that electrical power is provided to the at least one electrical guide (811, 812; 911, 912), and wherein the at least one electrical connection device (714, 715) is for being in electrical connection with the at least one electrical guide (811, 812, 911, 912) such that electrical power is provided to the motor (710).
