Abstract (en)  
[origin: WO2013017277A1] The invention relates to a sole chassis for shoes comprising a flexible front sheet assigned to the front foot area, which is connected in an articulated manner via a bending edge to a flexurally rigid rear sheet assigned to the rear foot area, wherein the front sheet comprises a corrugated structured sole made of spring steel or another flexible hard material, which can be bent at an angle with respect to the longitudinal axis and is designed to be flexurally rigid in the transverse area and is connected to the rear sheet via a bending edge.
