Abstract (en)

[origin: WO2013017167A1] The invention relates to a drivable floor cleaning machine, comprising a chassis (12), at least one cleaning head (20) and a holding device (40) by which the at least one cleaning head is held on the chassis and can be lifted relative to the chassis. The holding device comprises a first rod arrangement (42), which is rotatably held on the chassis by means of a first bearing device (44), a second rod arrangement (56), which is rotatably held on the chassis by means of a second bearing device, a third bearing device (66), by means of which the at least one cleaning head is rotatably held on the first rod arrangement, and a fourth bearing device (78), by means of which the at least one cleaning head is rotatably held on the second rod arrangement. The at least one cleaning head is assigned a stop (92), at which the at least one cleaning head is supported when a specific raised position of the at least one cleaning head relative to the chassis is reached, and at which the at least one cleaning head is rotatable relative to the chassis by means of the support.
