Abstract (en)

[origin: WO2013017684A2] The method for assembling reinforcements for reinforced concrete provides to prearrange an interception plane of a transverse reinforcement stirrup and a mobile abutment plane in a direction perpendicular to said interception plane, a plurality of interconnection elements longitudinal to the reinforcement to be made and relative union means at the interception plane. The method provides as well to feed a first stirrup on the interception plane, to unite the first stirrup with the interconnection elements through union means, to feed a controlled extension of the interconnection elements through control means associated with feeding means. The first stirrup is then released on an interception plane and a second stirrup is fed for performing the union with the fed interconnection means, through the union means. Finally the displacement of the mobile abutment plane is operated in a direction perpendicular to the interception plane for storing the stirrups united with the interconnection means.
