Abstract (en)
[origin: WO2013017622A1] The invention relates to a multi-layer component, comprising at least one base layer, which contains concrete and is preferably made of concrete, and one reinforcing layer, which is connected to the base layer and which is designed as a substantially plate-shaped profiled body at least in some sections and which bounds at least one insulation chamber at least in some sections. The invention further relates to a building that has at least one multi-layer component according to the invention and to a method for producing the multi-layer component according to the invention.
