Abstract (en)
[origin: WO2013020646A1] The invention relates to a fuel cell system (1) comprising at least one fuel cell (2), with water-guiding component parts and components (10, 11, 14, 15) in the region of the feed and discharge of educts and products to and from the fuel cell (2), comprising at least one cooling circuit (16) with a liquid cooling medium for cooling the fuel cell (2). The invention is characterized in that the water-guiding component parts and components (10, 11, 14, 15) are in thermal contact with the cooling medium at least during individual operating phases of the fuel cell (2).
