Abstract (en)

The device has a brake (1) provided with a continuous central bow (6) to apply elastic return force to return braking branches (4) to a braking position. A blocking device occupies a blocking configuration and a non-blocking configuration in which the brake brakes the ski in the position, where the device is mounted to move relative to the brake so as to occupy the blocking or non-blocking configuration. The blocking device has blocking element acting on the brake during actuation of the device by applying an effect of positioning the brake in the non-braking position opposite the force. An independent claim is also included for a heelpiece and braking device assembly for attaching a rear part of a ski boot to a touring ski.

Abstract (fr)

Dispositif de freinage pour ski de randonnée comprenant un frein (1) et un dispositif de blocage pouvant occuper une configuration de blocage dans laquelle le frein (1) est immobilisé par le dispositif de blocage en position de non freinage et une configuration de non blocage dans laquelle le frein est apte à freiner le ski dans une position de freinage, caractérisé en ce que le dispositif de blocage est monté mobile en coulistement par rapport au frein (1) de manière à occuper la configuration de blocage ou de non blocage.
