Abstract (en)

[origin: EP2740544A1] The apparatus (2) has a tubular inlet opening (4) for a liquid i.e. liquid plastic, and a discharge opening (8) that is provided in line connection with the supply opening. The discharge opening is provided with an opening cross-section that is wider than height of the opening. The discharge opening is formed in a wall element (14) that is able to be removed from the liquid dispensing apparatus. A fiber element is formed in a wall element. The wall element is arranged with a connector that cooperates positively with a counter-connection element.
