Abstract (en)

[origin: EP2740869A1] The arrangement has a driven shutter bar whose longitudinal extension part is fastened on a window and a door. A door panel is provided with an unlocking serving fitting element i.e. issuing scissors, on a portion (48) of a closure bar (17). A force transmission element (50) transmits driving force (45) on a mounting element (38) and discharges the driving force at a top (47) and bottom (49) of the portion. A longitudinal extension of the closure bar passes through the portion. An intermediate part (42) is arranged in the closure bar and the fitting element. An independent claim is also included for a method for driving a closure lath fitting arrangement.
