Abstract (en)

[origin: EP2741033A2] The device (1) has upper and lower heat-insulated inner containers (2a, 2b) forming cooling chambers (3a, 3b) for storing cooling goods, where the cooling chambers are closed by respective door blades (4a, 4b). The lower container has a base wall with a draining opening (7a) for draining condensation water from the containers. An annular insertion part comprising a circular disk ring and a circular opening is arranged at the opening and made from material i.e. copper, that is effective against microorganism.
