Abstract (en)

[origin: EP2741308A1] The operating device (1) has a carrier element (3) that is provided for pivotably mounting a control element (2) around a pivotal axis (4) from an original position into a tilting directions (9,10). An electrical switching device is operated in tilting positions of the control element. The control element is formed as a slide switch, and is linearly displaced from the original position into an operation position along the sliding direction (11,12).
