Abstract (en)
[origin: WO2013020932A1] A unit composed of helmet and eyeshield comprises a shell (11) and an eyeshield element (12), the latter designed to be placed in front of the face of the user. The upper edge (21) of the eyeshield element (12) matches the profile of the front lower edge (19) of the shell (11). A magnet device (14) is mounted on both edges (19, 21) and has a first series of permanent magnets (15), which are rigidly connected to one of the two edges (19) and interact, by magnetic attraction, with complementary elements (20) provided on the opposite edge (21). This front magnetic connection area between the two edges (19, 21) also comprises means for orienting the tilt of the eyeshield in order to adjust the contact on the face.
