Abstract (en)
[origin: GB2493542A] The invention relates to a bathing seat 1 for a child and comprises a base 2 with at least one sucker pad 3 so that it can be adhered to the internal bottom surface of a bath, basin or sink. A collapsible superstructure 5 is mounted on the base. The superstructure has a seat back 6 coupled to the base, a divider 7 coupled to the base at a position opposed to the seat back and a ring structure 8 coupling the seat back and divider. A child to be bathed may be placed within the ring structure with its back against the seat back and its legs straddling the divider. At least the seat back is hollow and inflatable via a valve, and also deflatable via the valve allowing the superstructure to collapse on to the base.
