Abstract (en)
[origin: GB2493552A] A vacuum pump comprising a scroll pumping mechanism 10, which comprises two scrolls 20, 22 which are co-operable for pumping gas along a pumping channel from an inlet to an outlet on relative orbiting motion of the scrolls and a gas conduit 38 having an inlet 40 at a first location of the pumping channel 32 and an outlet 42 at a second location of the pumping channel allowing over-compression at the first location of the pumping channel to be exhausted to the second location of the pumping channel, where a one-way valve 44 is located in the gas conduit and allows the passage of gas through the conduit from the conduit inlet to the conduit outlet only when a predetermined pressure differential between the first and second locations of the pumping channel is generated during roughing when the scroll inlet is at or close to atmosphere.
