Abstract (en)

[origin: WO2013024225A1] Method of characterizing touch on a surface of a tactile sensor comprising the following steps of: updating at least one first characteristic value of a current zone of the surface of the tactile sensor to be characterized, said first characteristic value being associated with a type of touch on the surface of the tactile sensor, and determination of a state of characterization of said current zone to be characterized, as a function of said at least one first characteristic value updated, by a set of characteristic values associated with types of touch on the surface of the tactile sensor.
