Abstract (en)

[origin: EP2743204A1] The package has surfaces provided with a pre-perforated tear-off strip that is frictionally secured to a handle, where the package is made from a shrunk polymer film. Stackable goods are stacked in a matrix and fixed at an edge side that is surrounded by the shrunk polymer film. An outer side of the handle is printed with a non-transparent polymeric film. The handle is non-positively connected with the shrunk polymer film in a region of the tear-off strip. A pull tab is arranged at a top side and comprises a reinforced inner shell. Independent claims are also included for the following: (1) a method for manufacturing a re-sealable package (2) a device for manufacturing a re-sealable package.
