Abstract (en)
The method comprises pretreating a carbon fiber-reinforced plastic component with gaseous sulfur trioxide for 10 seconds to 10 minutes, chemically depositing a metal layer as a seed in a bath, rinsing the component with water, and sand-blasting the component before the steps of pretreatment and treatment with nitric acid. The carbon fibers are embedded in a thermosetting material. The deposition step includes seeding a component in the bath metal layer. The seeding step includes treating the component with ionogenic palladium solution, and electrically energizing the bath.

Abstract (de)
Die Erfindung betrifft ein Verfahren zum Beschichten eines Bauteil mit einer Metallschicht in einem Bad, und zwar nach einer Vorbehandlung des Bauteil in gasförmigem Schwefeltrioxid; bei dem Bauteil handelt es sich um eine Kohlenstofffaserverstärktes Kunststoffbauteil.
