Abstract (en)
[origin: EP2743589A2] The appliance has a cooking area formed with an opening on a top plate. A neck portion (21) of a burner body (20) protrudes from the opening. A support wall is oriented facing away at the burner body arranged under the top plate. A fastening element made of spring steel is provided with a support element and a holder (60) and in contact to the support wall. The holder of the support element extends to a surface of the top plate through the opening of the top plate and bears on the support wall of the burner body.
