Abstract (en)

The embodiments of the invention relate to a connection apparatus (MC) for connecting at least two signal lines (SL1, ..., SL5, SLG) to at least two further signal lines. The connection apparatus (MC) contains the at least two signal lines (SL1, ..., SL5, SLG), a first plug device (PD1) connected to a first one of the at least two signal lines (SL1, ..., SL5, SLG), at least a second plug device (PD2, ..., PD11) connected to a second one of the at least two signal lines (SL1, ..., SL5, SLG), and a movably mounted support system (MMSS) for a movable support of the first plug device (PD1) and the at least second plug device (PD2, ..., PD11). The embodiments of the invention further relate to a signal processing apparatus for electrical signals and/or optical signals, which contains the connection apparatus and to a modular active antenna system, which contains the signal processing apparatus.
