Abstract (en)

[origin: WO2013026447A2] The invention relates to an aerosol-forming material for a hookah, said material comprising a first substance and at least one second substance which is held by the first substance and which is at least partly released following activation of the aerosol-forming material. The first substance has pores for receiving the second substance and the second substance is a fluid. According to the invention, the first substance comprises a synthetic zeolite.
