Abstract (en)

[origin: US2013045271A1] The present invention is directed to steroid hormone delivery systems and methods of preparing the same. In particular, the steroid hormone delivery systems provided include a primary construct having one or more hydrophobic steroid hormone esters in the form of a liposome, a lipid particle, a micelle, an emulsion or a niosome which is then formulated into a secondary construct for administration. Exemplary secondary constructs include a film for sublingual or buccal administration.
