Abstract (en)
[origin: WO2013026562A1] Depicted is a ball game, which comprises a track that is inclined at least in the operating state, said track being delimited on all sides by a start unit (2) for the inlet of a ball onto the track, by a goal unit (3) for catching a ball from the track, and by delimiting walls (4). In order to avoid complex goal units comprising a plurality of areas for a track, it can be provided that a plurality of identical tracks that comprise components for deflecting a ball, are arranged separately from one another in an adjacent or superposed manner, wherein for each track a timekeeping system is provided, with which by means of at least one sensor the run time can be measured that a ball requires for running through a predetermined section of a track between the start unit (2) and the goal unit (3).
