Abstract (en)
[origin: WO2013023746A1] A machine for renewing a track has a main frame (2) with devices (7) for taking up old sleepers (8) and for laying down new sleepers (8). The main frame (2) is composed of a frame section (4) which is at the front, with respect to a working direction (3), and a rear frame section (6) which is connected to said front frame section (4) by a frame joint (5). The front frame section (4) has a supporting frame (11) which protrudes with a front end (9) beyond a front rail bogie (10). A support device (16) for optionally supporting the front end (9) on a vehicle frame (12) located underneath it is assigned to said supporting frame (11).
