Abstract (en)
[origin: WO2013023794A2] In order to enable an authorized repeated opening of an object to be locked and to provide protection from manipulation and unauthorized opening in a cost-effective manner, a locking device, a system and a method for operating a locking device are provided, wherein the locking device comprises a housing having a housing body and a receiving region, which is suitable for receiving elements of an object to be locked, which can be connected together, a movable bolt that extends at least through the housing body of the housing and is guided through the receiving region in a locked state; a locking mechanism that prevents a movement of the bolt in a locked state of the locking device; and a control unit for controlling the locking mechanism.
