Abstract (en)  
The table is characterized mainly to have a seat incorporated on the edge of the board table and in the controller mechanism of height of the item mentioned before. The characteristics of this table have as purpose to improve the comfortably and the postural health in the position of sitting. The comfortably is essential for this space that we are used to spending a lot of time seated for working, studying or leisure reasons. The stability of the table keeps from a metallic chassis made by two feet put in a side of the broad and joined between them in a half height by a bolster which is welded or screwed together, appearing the broad independently and with the function of going up or going down to get the suitable height, for that, between the top part of each foot, the broad is located a scissors lift put in a frame in two symmetric rectangles, in charge of regulating the height of the broad. This regulation system is designed to realize the action of going up or going down the height of the support in the forearms in a fast, comfortable and easy way according to user convenience.
